

OUR STRENGTH IS
OUR EXPERIENCE

FOR WHAT APEX PROTECT?

When it comes to production in cleanrooms, the products produced need to be protected from both microbial and particulate contamination. Apex Protect provides the highest level of protection with the products offered.

Apex Protect;

- Shares knowledge and experience on cleanroom products with customers and delivers products developed with the latest technology
- Focus on solutions with customers
- Never compromises on quality
- Adopted cGMP
- ISO 9001 certified company
- To give the best price for the best quality; either the products are produced by themselves or purchased from direct producers.
- The largest capital is to focus on cleanroom products, experience in this subject and highly trained employees

CLEANROOM GARMENTS

Cleanroom garments are the most important barriers between cleanrooms and people. Garments are produced from special fabric, for comfort of the garments prioritise.

In cleanroom garments; we have a wide product range such as overalls, underwear, apron, headgear, footwear, galosh, socks, bags, cuffs, neck collar and bonnet. The garments are special sewing; models can be changed in accordance with the usage preferences requested by the customer.

AP113KUM fabric consists of 98% Polyester - 2% Polyester Carbon composition with antistatic properties suitable for use in GMP A, B and C / ISO 4, 5, 6 and 7 class areas; It is certified by ITV that it is resistant to at least 50 washes and autoclaving. The fabric has a very high filtration characteristic and the comfort of the clothes is also high.

AP113KUM has 6 different colours: white, blue, dark blue, gray, light green and dark green.

AP125KUM fabric consists of 98% Polyester - 2% Nega-Stat composition with antistatic properties suitable for use in GMP D / ISO 8 class area. AP125KUM has 2 different colours: White and blue.

AP80KUM fabric is used as underwear fabric and it is 100% Polyester; has 3 different colours: white, blue, and green.

Please contact us for detailed information.

WASHING TRACKING PROGRAM

Washing tracking program designed to follow the used clean room garments; according to the manual system; it is a more faster, more smarter (intelligent barcode), more economical, less error-prone, provide better reporting opportunities, more validated, more cGMP-compliant program. Software validation and maintenance service is also offered. The necessary hardware and barcode reader for the installation is also offered by our company. Please contact us for detailed information.

DETERGENT

In the washing of cleanroom garments; it is necessary to use a special liquid detergent in order to ensure that the antistatic properties of the garments are not lost and that the detergent-derived particle level that may remain in the garment is kept to a minimum. Purlovan® formula developed especially for the washing of cleanroom garments; it's environmentally friendly and avoids the use of unwanted borate, aluminum and phosphorus for the cleanroom industry. In the tests made; even after 50 washings, for antistatic and ESD garments; it has been observed that the protective function is maintained.

CLEANROOM GLOVES

Cleanroom gloves must be washed and cleaned with water in clean rooms after production. The amount of particles present on the surface of the gloves must be known.

Glove manufacturers may wish to brand their gloves as ISO Class 4 (Fed STD Class 10) or ISO Class 5 (Fed STD Class 100), Shield Scientific challenge this paradigm and would ask how classifications

for airborne particulates relate to gloves. In reality there are no internationally recognised specification limits that would determine whether a cleanroom glove is ISO Class 4 (Fed STD Class 10) or ISO Class 5 (Fed STD Class 100) compatible. Accordingly it is left to users to decide what is suitable for their process. With this in mind, Shieldskin Xtreme™ gloves are branded as follows:

BRANDING	PROCESS	USER BENEFITS
DI	Single washed in deionised water	<ul style="list-style-type: none"> The most economical option Typical particle levels $<3000 \text{ per cm}^2 \geq 0.5 \mu\text{m}$
DI+	Triple washed in deionised water	<ul style="list-style-type: none"> The median brand option Typical particle levels $<950 \text{ per cm}^2 \geq 0.5 \mu\text{m}$
DI++	Washed several times in deionised water	<ul style="list-style-type: none"> Premium offering based on extra processing Typical particle levels $<650 \text{ per cm}^2 \geq 0.5 \mu\text{m}$

ISOLATOR CLEANING TOOL

The ICT used to clean the isolator and LAF cabinets has a breakable feature. The ability to break is a great convenience developed and patented by our company. ICT is made from autoclavable stainless steel and is lightweight and easy to grip.

It is used with 100% Polyester ICT Mop, which can be easily attached and detached. The ICT Mop is available in both non sterile and sterile (single and double layer packaged). Mops are specially sewed for ICT, packed in cleanrooms washed with DI water. Mops are certified on lot basis.

IPA 70%

70% IPA consists of European Pharmacopoeia grade IPA and water for injection in order to guarantee endotoxin levels below 0.25EU/ml; is filtered from 0.2µm filter.

Bag-in-Bottle trigger sprays are used in cleanrooms in the pharmaceuticals industry and hospitals. This system has been validated to give sterility in use for a 13 weeks after the first usage.

It has sterile and non-sterile form. It has being sterilised by a validated gamma irradiation process at no less than 25 kGy; double bagged.

NEUTRAL DETERGENT

For effective disinfection to be achieved it is imperative that surfaces are free from any visible soiling or build up of residue from previous disinfectant applications.

Neutral Detergent formulated to be low foaming it does not leave significant residues or smears. With highly effective surface cleaning properties it is ideal when a deep clean is required.

Bag-in-Bottle trigger sprays system has been validated to give sterility in use for a 13 weeks after the first usage.

It has being sterilised by a filtered from 0.2µm filter and a validated gamma irradiation process at no less than 25 kGy; double bagged.

STICKY MATS FOR CLEANROOMS

The importance of using these mats is that the particles on the bottom of the shoes are prevented from entering the cleanroom.

Particularly effective is the combined use of permanently washable (for large particles) and retractable (stronger and smaller particles) mats.

SHOES & CLOGS

Shoes and clogs brought under the Abeba and Soldini Professional brands; autoclavable clogs are used for the pharmaceutical industry and ESD-based clogs and shoes are used for the electronics sector.

Please contact us for color and size alternatives.

MASKS

Masks are produced in 3 floors with special fabric which leaves less particles for cleanroom. It's not a hospital mask that leaves a lot of particles. Our sterile mask is individually packaged, gamma irradiated. Certificate of Irradiation (COI) is available on a lot basis.
