Who We Are?

Our Aim

Who We Are?

Temizoda Marketi started its business life in 1995 with İNŞEL Yapı ve Teknik Donatım Sistemleri Ltd. Sti. Specializing in cleanroom consultancy, design, implementation, documentation, and training, İNŞEL aims to meet the needs of personnel working in cleanrooms, sterile areas and critically controlled areas when it aims to provide turnkey services in the projects it implements.

İNŞEL, which has started to supply consumables in Cleanrooms, sterile areas and critically controlled areas through its representatives since 2004, has separated this department from its body in time in order not to cause confusion for our valued customers and to provide better service led to creation of Temizoda Marketi Laboratuvar Ürünleri A.Ş.

Today, as Temizoda Marketi, we are always with you, our valued customers, from product selection to training with our professional and experienced staff, while following the technology closely to provide you with the best service in the most accurate way.

Our Aim

As Temizoda Marketi, we know our valued customers from the very beginning, from the installation of your hygienic area and Cleanrooms, and we know your needs. We are aware of how important it is to use the right material in the right place, and we are always at your side to supply you with the best quality and right products with the most appropriate solutions. We supply the highest technology products for you, and we are with you wherever you need, from training to after-sales user Support.

We know that choosing the right product is never the cheapest or the most expensive, and at this point, we help you with the most optimum benefit options...

Why Temizoda Marketi?

We know you; we know your needs and we are here to help you in the best way

As Temizoda Marketi, we try to get to know you first and learn about your business, processes, and needs and offer you the most suitable solutions.

As Temizoda Marketi, we are always happy and proud to assist you with our trained and experienced staff.

We are working to give you the best and highest quality service with our experienced staff dedicated to each department.

As Temizoda Marketi, we are always happy and proud to assist you with our trained and experienced staff.

We are working to give you the best and highest quality service with our experienced staff dedicated to each department.

Choosing the right product is one of the most important issues in cleanrooms and critically controlled areas.

As Temizoda Marketi, we choose the most accurate and best quality products for your business in line with your demands and goals and recommend them by making them economical.

The materials used in critically controlled areas are as special and important as the areas you work in.

We know that the most suitable product for you is not always the most expensive or the cheapest, but it should be the best quality. In order to offer you the optimum solution, as Temizoda Marketi, we offer you the products you need by diversifying them with alternatives from different brands.

As Temizoda Marketi, we know the importance of the documentation of all materials you use in critically controlled areas, and we provide all documents, certificates, analysis reports, and all necessary documentation for you, that are necessary, during the installation phase, application and validation.

Temizoda Marketi does not only approach you as a product supplier. At the same time, it stands behind the products it sells and does not hesitate to take all necessary actions to eliminate it when you have any problems.

It does not sell products without the full support of the companies it represents. When there is a problem about the products, Temizoda Marketi approaches the issue as if using it himself and ensures that it is resolved as soon as possible. Thus, you will get maximum efficiency from the product you have bought.

As Temizoda Marketi, we would like to help you with all the products you need with our wide product range. Even if the product you need does not appear in our catalog, we try to find the product you are looking for with our partners abroad. Thus, we provide you with one-stop service as sole responsibility.

Temizoda Marketi does not only supply you with products, but also provides training, which is one of the greatest necessities of our time. No matter how accurate the product is in critically controlled areas, incorrect or unconscious use can cause unwanted problems. Upon request, it provides the necessary training for the products you have purchased, either by itself or by the manufacturer.

Our Representatives

We are working with well-established companies that have proven their quality all over the world in auxiliary products used in clean rooms, sterile areas, laboratories and other critically controlled areas, to provide you with the best and right product.

Tiger-Vac's CR-1 ULPA Cleanroom Vacuum Cleaner has a plastic tank and is equipped with a ULPA filter (U15) downstream of the motor. It features a 3-stage filtration system consisting of a ULPA filter (U15), a main cloth filter and a disposable filter bag. The CR-1 ULPA dry vacuum is clean room compatible and can be used for general cleaning in controlled environments. This vacuum cleaner is for dry use only!

The **Tiger-Vac EMI-CWR Cleanroom Vacuum Cleaner's** chrome plated steel construction ensures it will withstand abuse and industrial grade O-rings and gaskets ensure it is leak free at all times. The vacuum cleaner is equipped with a ULPA filter (U15) downstream of the motor. EMI/RFI shielding ensures there is no interference with computers or other sensitive electronic equipment.

The device is also antistatic and ESD safe. For critical electrostatic controlled applications that require zero volt potential, a special TELEKOM package is available (conductive rollers are fitted to the dry vacuum and a special tool kit is provided).

The EMI-CWR is clean room compatible and can be used in the pharmaceutical industry. It is designed for general cleaning in contamination-controlled environments. The cleanroom vacuum cleaner is equipped with a two-speed control that allows the user to regulate the suction strength. There is also a built-in thermal protector that prevents the motor from overheating if there is a blockage in the nozzle or hose.

The clean room vacuum cleaner CR-1000 (CV) is clean room compatible and can be used in the pharmaceutical industry. The vacuum is designed for general cleaning in controlled environments.

The "clean room vacuum cleaner MV-1CR (GC)" is for dry recovery in the pharmaceutical sector. This is equipped with a golf cart for easy maneuverability.

The **"CR 4D cleanroom vacuum cleaner"** has a high-density polyethylene tank and a chrome-plated motor head and is equipped with a ULPA filter (U15) downstream of the motor. It has a 4-stage filtration system consisting of a ULPA filter (U15), a double cloth filter and a disposable filter bag. An internal HEPA filter (H14) is available as an optional fifth stage of filtration.

The CR 4D cleanroom vacuum is EMI/RFI shielded and will not interfere with computers or other sensitive electronic equipment. This dry vacuum cleaner is clean room compatible and can be used for general cleaning in controlled environments.

The **"ESD vacuum cleaner AVSD-25L (DT) MFS HEPA"** is an Atex compressed air safety vacuum cleaner with automatic switch-on. Its HEPA filter (included) has an efficiency of 99.995% of 0.3 microns. It was developed for picking up dry and potentially explosive dusts.

The **"Cleanroom handheld vacuum cleaner MV-1CR (HH)"**, which is completely made of stainless steel, is equipped with a ULPA filter (U15) upstream of the motor. EMI/RFI shielding ensures there is no interference with computers or other sensitive electronic equipment.

The device is antistatic and ESD safe. Any static electricity produced during the vacuuming process is quickly and effectively dissipated to the floor. The MV-1CR(HH) is clean room compatible and can be used in the pharmaceutical industry. It is designed for general cleaning in contamination-controlled environments.

The **all-stainless-steel Tiger-Vac MV-1CR (BP) clean room backpack** is equipped with a ULPA (U15) filter upstream of the motor. EMI/RFI shielding ensures there is no interference with computers or other sensitive electronic equipment.

The device is antistatic and ESD safe. Any static electricity produced during the vacuuming process is quickly and effectively dissipated to the floor.

The MV-1CR (BP) is clean room compatible and can be used in the pharmaceutical industry. It is designed for general cleaning in contamination-controlled environments.

The Tiger-Vac CWR-10 (PHARMA) is a clean room vacuum for wet and dry cleaning. It has an electropolished collection container that can be autoclaved. The vacuum is equipped with a double ULPA filter (U15) downstream of the motor. The CWR-10 is EMI/RFI shielded and therefore does not cause any interference to computers or other sensitive electronic devices. The device is electrostatically dissipative and ESD-safe with an electrical resistance of less than 10 ohms. Any static electricity during vacuuming is quickly and effectively dissipated to the floor.

This clean room vacuum can be used in the pharmaceutical industry. It is designed for the removal of broken ampoules and glass in controlled environments. The broken ampoules and glass are separated from the liquid and then collected in an autoclavable strainer basket made of electropolished AISI 304 stainless steel. The sieve basket allows easy and safe disposal of collected materials.

The "RR vacuum cleaner ATEX-40A (CR)" is a vacuum cleaner for the safe recovery of combustible / conductive dusts.

Tiger-Vac's "CWR-10 (4W)" is a cleanroom wet/dry vacuum. It has a stainless steel collection container that is autoclavable. The device is equipped with a double ULPA filter (U15) downstream of the motor. The CWR-10 (4W) is EMI/RFI shielded and therefore does not cause any interference with computers or other sensitive electronic devices. The suction cup is antistatic and ESD safe. Any static electricity during vacuuming is quickly and effectively dissipated to the floor.

The "CWR 8 Poly" is a clean room vacuum for *Pharma - Wet & Dry Recovery.

The Tiger-Vac CWR-8 (4W) is a cleanroom wet/dry vacuum cleaner . It has a stainless steel collection container that is autoclavable. The device is equipped with a double ULPA filter (U15) downstream of the motor. The CWR-8 (4W) is EMI/RFI shielded and therefore does not cause any interference with computers or other sensitive electronic devices. The suction cup is antistatic and ESD safe. Any static electricity during vacuuming is quickly and effectively dissipated to the floor.

This wet/dry vacuum cleaner is clean room compatible and can be used in the pharmaceutical industry. It is designed for basic cleaning in controlled environments.

The Tiger-Vac CWR-15 (4W) is a cleanroom wet/dry vacuum cleaner . It has a stainless steel collection container that is autoclavable. The device is equipped with a double ULPA filter (U15) downstream of the motor. The CWR-15 (4W) is EMI/RFI shielded and therefore does not cause any interference with computers or other sensitive electronic devices. The suction cup is antistatic and ESD safe. Any static electricity during vacuuming is quickly and effectively dissipated to the floor.

This wet/dry vacuum cleaner is clean room compatible and can be used in the pharmaceutical industry. It is designed for basic cleaning in controlled environments.

The "**ESD vacuum cleaner AVSD-40L (4W)**" is an ATEX vacuum cleaner for use in potentially explosive dust atmospheres. Due to the "NOT" - presence of an ignition source in the drive, the vacuum cleaner is also ideal for such work in zones 22 and 21.

The "**CWR-10 EX (CV)**" is a pharma vacuum for wet & dry recovery. ESD-safe vacuum cleaners for potentially explosive areas are designed in such a way that there is no risk of ignition. Metal parts or static-dissipative powder coating are used to prevent electrostatic discharge (ESD)

The "**Cleanroom Vacuum Cleaner CR-1400 D**" is a new generation cleanroom vacuum cleaner for dry recovery. It was specially developed for the pharmaceutical, semiconductor and microelectronics industries. This features an all stainless steel construction with an electropolished finish to remove surface contamination. In addition, it is autoclavable up to 121°C (except for the drive head).

The "**Cleanroom Vacuum Cleaner CR-1200 D**" is a new generation cleanroom vacuum cleaner for dry recovery. It was specially developed for the pharmaceutical, semiconductor and microelectronics industries. This features an all stainless steel construction with an electropolished finish to remove surface contamination. In addition, it is autoclavable up to 121°C (except for the drive head).

Cleanroom Vacuum Cleaner CR-1400WD"
New generation clean room vacuums for wet and dry recovery

Clino® KR/A 10
Mobile, autoclavable cleanroom vacuum (dry vacuum) for the use in ISO class 4/5 cleanrooms. Specifically designed for cleanroom use.

Clino® KR/A 30
The cleanroom Clino KR/A 30 has been developed for the intake of dust, wet production residues and liquids in the ISO class 4/5 cleanrooms. The handling is very easy due to the lowerable and easily removable container. Filter system during use as a dry vacuum

Synthetic filter bag #212500

Filter bags for the following clean room vacuum cleaners:

- CR-1 ULPA
- CR-1000 series
